

# SFX vinnustofa

25. janúar 2019

Þóra Gylfadóttir verkefnastjóri

Landskerfi bókasafna

# Dagskrá

- Upprifjun
- Nýjungar
- Spurningar – og væntanlega svör
- Þið vinnið
- Hvað verður um SFX-ið þegar nýja kerfið kemur? Sigrún
- Þið vinnið meira
- Búið

# Upprifjun - uppsetningin

Figure 3: Multiple SFX Instances - Including One Instance for Shared Resources

- **Scenario 1** - Each local instance maintains its own SFX sources. For each of these sources, the local instance has control over the design and layout of the SFX menu.

First, an SFX source sends an OpenURL to a local SFX instance. The instance forwards this OpenURL to the shared resources instance and receives information about services. After receiving this information, the local instance determines which services, both local and remote, to present in the SFX menu screen.

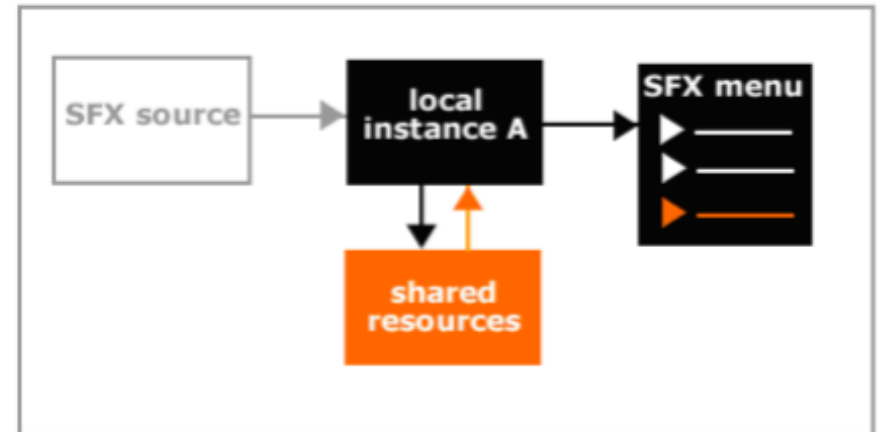

Figure 4: Local Instance Shared Resource

# Upprifjun - hugtök

- **Source** = Gagnagrunnar – bæði A&I og með heildartexta
- **Target** = Heildartextar, útdrættir, efnisyfirlit o.s.frv.
- **Object** = Tímarit, bækur, skýrslur o.s.frv.
- **Portfolio** = „Pakkar“ af tímaritum, bókum o.s.frv. – með nákvæmum upplýsingum um eiginleika innihaldsins, þ.m.t. Upphafssár, árganga og hefti
- **Service** = Það sem á að gera / sækja. Sækja heildartexta, abstrakt, þanta millisafnalán, leita eftir DOI eða á Google Scholar

# Upprifjun – uppfærsla

- In SFX version 4, KB **updates** will generally be applied **each weekend**
  - Heimild: CARLI á <https://www.carli.illinois.edu/products-services/link-resolver-sfx/update-responsibilities>

# Upprifjun – áminning

- **Leitir.is:** Tenging í fullan texta hjá EBSCOHost eru “Free Riders” – geta ekki birst í SFX-milliglugga nema tenging í sama texta sé hjá öðru/öðrum safni

# Upprifjun – Háskólinn á Akureyri

- Tölfræði – notkun á rafrókum í tölfræðilistum. **Query 14 : Books accessed via SFX ranked by use**
- Verkaskipting – landsaðgangur og háskólarnir – getum við séð hvað landsaðgangur er með ábyrgð á þar sem það er ekki sýnilegt í okkar instansi? **Já – næsta glæra**
- Þýðingar á listum – gott að rifja upp hvernig best væri að fara yfir listana
- Bæta við nýjum „targetum“ og hvernig á að aftengja þau

# Skoða áskriftir HVAR instans

- Þið getið skoðað áskriftir og töfræði landsaðgangs (Read Only)  
<http://gegnir.hosted.exlibrisgroup.com/sfxadmin/hvar>

User Name:        hvar  
Password:        lands2019

# Upprifjun – Heilbrigðisvísindabókasafn

- Bókapakkar – Primo Central Index og SFX
- “Landsaðgangstímarit” – local copy fyrir háskóla og stofnanir? **Glæran á undan**

# Hvað hefur gerst síðan síðast?

- SFX 4.0 er í loftinu
- Meiri sjálfvirkni
- Aggregator pakkar = AutoActive by default
- „Local“ fær aukið rými og vægi
  - Auðveldara að handlaga og bæta við
- KBART = Knowledge Base and Related Tools

# AutoActive

( 08:58 / 39:34 )

## Revision Updates: New Rules, More Automation

### Global Instance

Completely updated

### Local Instances

Updated only with:

- Automatic activations (**AutoActive** e.g. for aggregator packages)
  - Automatic updates (**AutoUpdate** setting)
- Deletions are performed automatically
  - Reports are created but no work is necessary

**Note: In SFX 4 all aggregator packages are set to AutoActive by default**

# Hvað er KBART?

- KBART = Knowledge Base and Related Tools
- KBART was initiated to improve the transfer of data between content and knowledge base providers. Knowledge bases are the central resource for OpenURL link resolvers such as SFX to provide users with links to the full text of a reference based on their institutional affiliation
- <https://www.exlibrisgroup.com/niso-kbart-standardizing-holding-transfers-kb-content-providers/>

# Token from provider into SFX autoload target

- SpringerNature token ID lítur svona út: **7YyQ7K274o+n4KCP**
  - við Birgir erum svolítið rangeyð yfir þessu
- Elsevier ScienceDirect: Gengur ekki 😞
  - vegna flókinnar uppsetningar hjá Elsevier – sem er á IPS basis
- Ovid – vill einhver gera tilraunir með þetta? Landskerfi aðstoðar

# Tilraunir með KBART í „sandkassanum“

- A-Z listinn

[http://gegnir.hosted.exlibrisgroup.com/ilc\\_test/journalsearch](http://gegnir.hosted.exlibrisgroup.com/ilc_test/journalsearch)

## Problem: Reliance on publisher system data

- Are publisher records on the library's entitlements accurate?

# Changes and New Functions in SFX 4.0
